## Weights/Measures Inspection Summary 2023-2024

\* 2023 - 1 Staff position vacant 4 months

Vector Control Weights & Measures Office

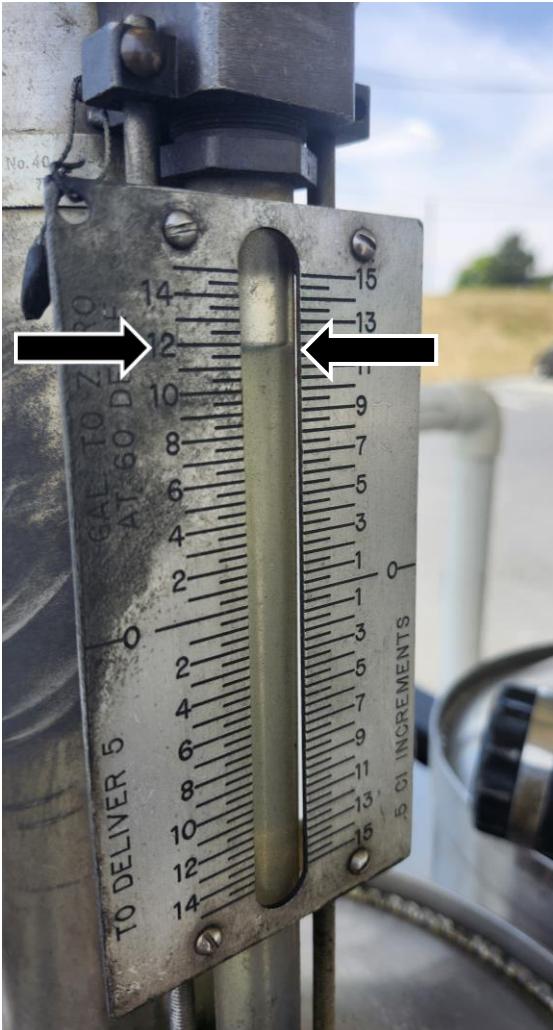

# Fuel 2024

- In 2024, our team conducted **4,671** fuel tests at 212 businesses in Cumberland County.
- The current failure rate for fuel pumps is approximately 3.5 %.
- Common reasons for pump failures:
  - Out of tolerance
  - Missing security seals
  - Display readability
  - Leaky hose
  - Missing fire extinguisher

vector Control Weights & Measures Office

# Common Reasons for pump rejection, fail test

## Out of Tolerance Range

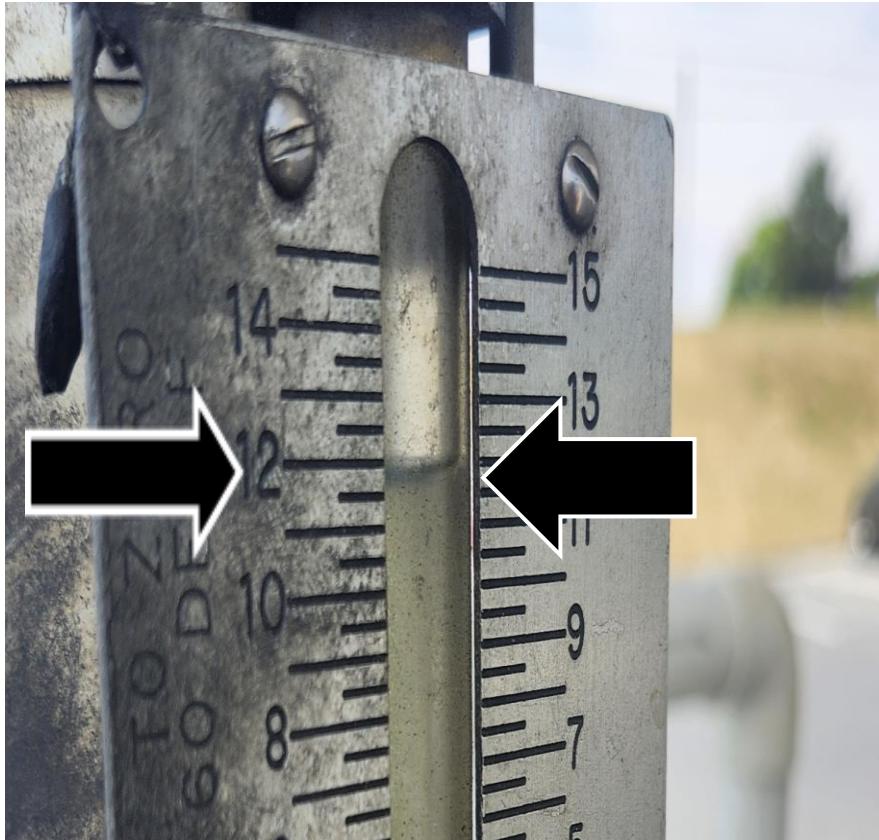

Per regulations, a fuel pump must be accurate to within 6 cubic inches per 5 gallons (3 ounces).

This pump was delivering 12 cubic inches of extra fuel per 5 gallons (6 ounces).

This affects the customer (extra gas) and the store (lost income).

# Common Reasons for pump rejection, fail test

## Out of Tolerance Range

@ \$3.20 gallon, 1 ounce fuel = 2.5 cents

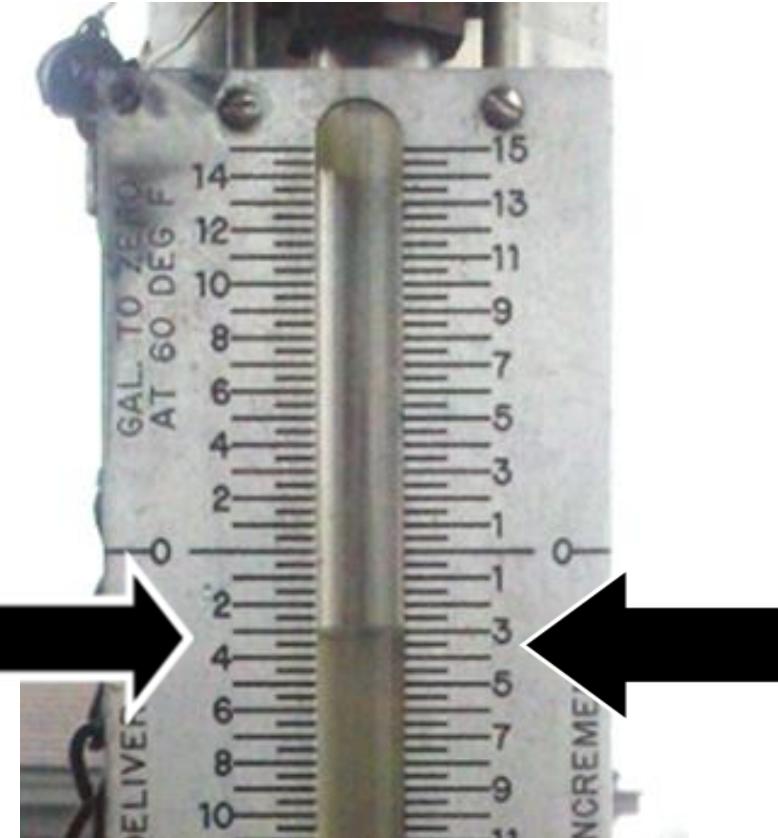

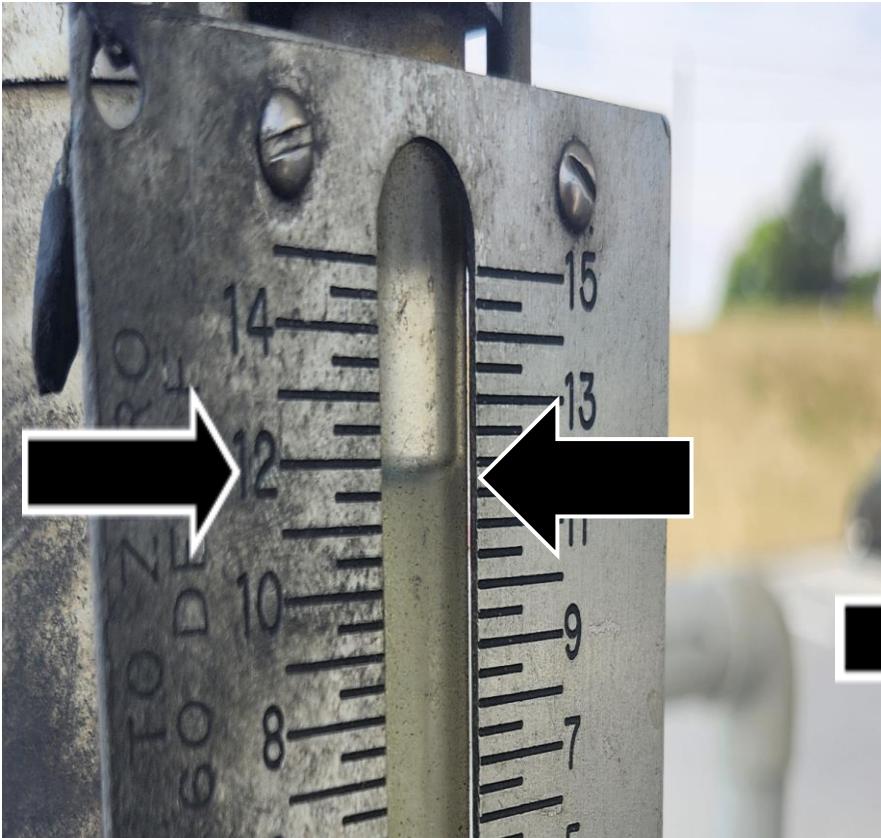

2.5 cents times 6 ounces = 15 cents

15 cents times 300 fills per /day = \$45 per day

\$45 per day times 365 =

**\$16,425 year**

# Tolerance Plus vs Tolerance Minus

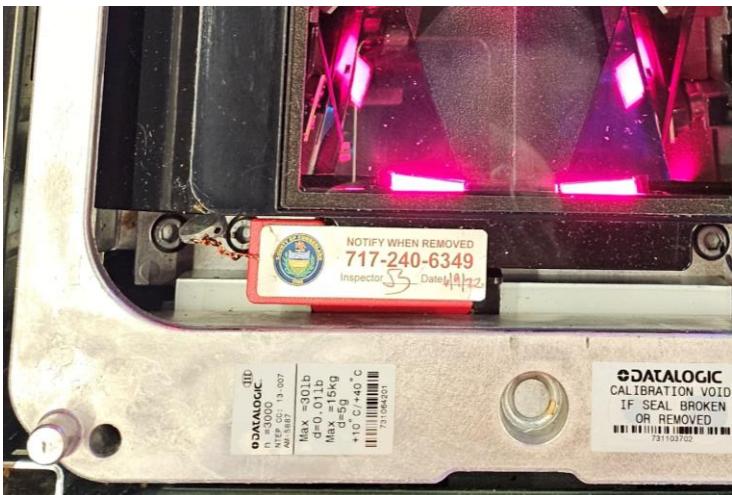

# Scale 2024

- Many varieties of scales are inspected and tested:
  - grocery store, deli, produce, self-weight, jewelry, shipping, propane, livestock, etc.
- At right is an example of a scale inspection conducted at a Pharmacy.
  - Notice the “old fan style” scale still used to weigh candy.
- Like fuel inspections, scales must fall within a specific tolerance to pass testing and to be useable.
- In 2024, we inspected 350 businesses including 1,610 scales.
- Of those, 63 devices failed (3.9%).
